- Meets and Exceeds all International Building Codes (IBC) and International Residential Building Codes (IRC)
- Exceeds IBC, IRC, BOCA, SBCC1, and ASCE7 Building Code Requirements
- Approval for 2nd Floor and Higher Applications
- Will Never Chip, Rust or Splinter
- Stress Tested/Impact Resistant

DuraLast Railing combines commercial grade strength with beauty and elegance, creating a railing system that is practically maintenance free. The DuraLast Railing system has a Limited Lifetime Warranty and is manufactured from stylish and strong impact resistant PVC.

DuraLast Railing has been engineered to accommodate normal temperature swings and changing climate conditions. It is manufactured from high quality rigid PVC with impact modifiers and high levels of Titanium Dioxide which prevent ultraviolet degradation. As with most plastics, vinyl will become less flexible in colder weather conditions; however, unless subjected to

unusual impact, it will not break. DuraLast is categorized as Self-Extinguishing, meaning it has a high flash point, 716 degrees F, so it does not readily ignite and does not sustain combustion once the source of ignition is removed.

Meeting or exceeding all International Building Codes and all International Residential Codes allows DuraLast Railing to be used in commercial and residential construction. Installs in 6 easy steps saving time and money. Compared to the cracking, chipping, splintering, and constant painting of wood or the denting and rusting of aluminum and steel, nothing holds up better than DuraLast Rail.

# CODE APPROVED NEWEL POSTS

The DuraLast Railing system offers two newel posts. The first, seen above, is a commercial grade newel post that meets all commercial and residential building codes. The second is a residential grade newel post that meets all residential building codes. Both newel posts are designed to integrate with the DuraLast Railing system giving a beautiful look that is secure and backed by commercial and residential building code approvals.
